

Email to SMS

Business SMS messaging has been made more accessible and easier to use by simply using existing email services.

Sending an SMS is as simple as sending an email and has been even further simplified with MessageNet's feature rich Outlook Plug-In tool.

Registered users of MessageNet can send an email from their existing systems, which is delivered as an SMS to any mobile phone. Simply address your email to **mobilenumber@messagenet.com.au**. Replies from the message recipient can be directed back to your inbox, enabling 2-way communication that is easier to track and costs far less than voice communications. Better still, you can send the same message to individuals or groups at the one time, ensuring a higher reach and a faster means of communicating critical information.

Features

- Send individual or bulk SMS messages from your email
- Replies are delivered to your inbox
- Direct number entry or select contacts from your address book
- 2-way communication enabling easy tracking
- Confirmation delivery reports

Benefits

- Easy to use
- Requires no additional software or licenses
- High reach and immediacy of critical communications
- Reduced communications spend
- Message tracking
- Improved operational efficiencies

Email address additions

When sending a message to MessageNet via email, there are some optional address controls that may be included with the destination number e.g. 041XXXXXX.fwd@messagenet.com.au. These are:

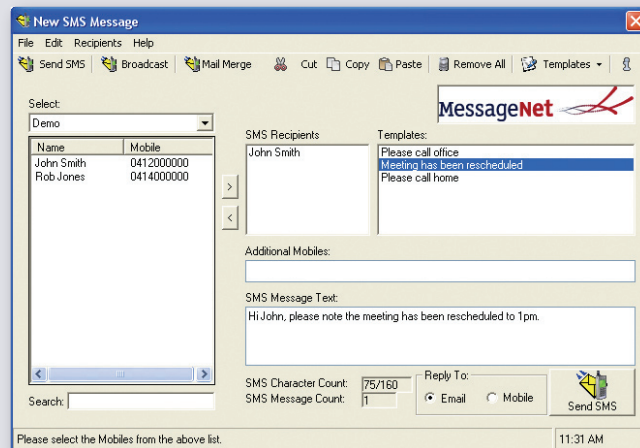

.fwd	Turns off any status/error email that is sent back to you when the message has been sent (email only)
.mms	Tells MessageNet that the mobile phone you are sending to is MMS compatible
.link	The number supplied is a Link radio pager
.hut	The number supplied is a Hutchison radio pager
.efax	The number supplied is a fax number

Applications

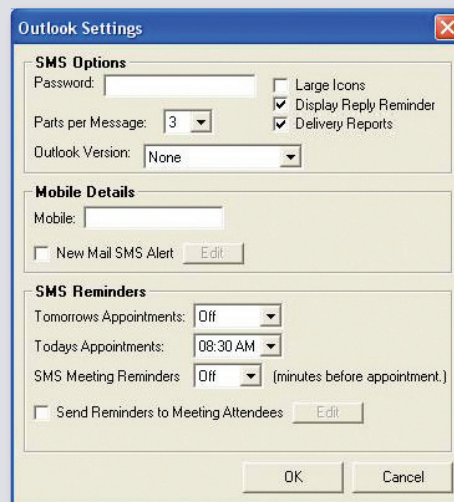

- Set automatic reminders for calendar events
- Send reminders to meeting attendees
- Communicate more efficiently with field staff
- Set up and manage message templates
- Broadcast critical communications
- Mail Merge for personalised messages
- Configure message reply paths

MessageNet Outlook Plug-In

MessageNet have developed an SMS plug-in that integrates with Microsoft Outlook 2002+ enabling users to easily send SMS messages to any contact or group from their Outlook Contacts directory.

The Plug-In tool facilitates a user-friendly yet feature rich method of sending SMS messages to individuals, groups, or contacts in your local and global address book.

Utilise setting options to configure reply paths, request delivery reports, and set up automatic calendar reminders for selected meeting attendees.
