

Mission Critical Monitoring

There is no simpler solution to fast, cost-effective IT communications when reliability, security and scalability are of utmost importance.

Monitor any event that occurs within your IT infrastructure and notify your staff immediately, anywhere at anytime with SMS.

SMS technology improves business processes

Many monitoring systems today require administrators to check logs or use an email notification mechanism to advise of any faults. In most cases however, staff need to be notified quicker in order to diagnose and repair faults earlier. MessageNet helps you achieve this.

SMS is available on a vast array of mobile networks around the world and can be delivered to staff anywhere and at any time. Unlike emails that may go unread for some time, particularly when staff are away from the office, SMS messages can alert staff almost immediately.

Applications

Preventative alerts:	Notification alerts:
Delayed system response times	Server outages
System disc quotas	Network outages
Virus infection notifications	Database server errors
Backup failures	Application alerts
	Un-Authorised access

Getting Started

Call us on **1300 55 15 15** to discuss how MessageNet SMS can be implemented into your business systems. Our technical staff can assist with any special software integration requirements.

Log onto our website www.messagenet.com.au for more information, pricing options and to sign up for a FREE TRIAL.

INTEGRATE with confidence

Extremely easy to integrate into your existing systems, the MessageNet Gateway can receive and send SMS messages from email, web, dial up, XML and various APIs. Replies to SMS messages can be re-routed to a URL, an email or a mobile phone.

A range of APIs are available at no charge from the MessageNet website, allowing seamless integration with your business software, systems and monitoring applications.

Available APIs

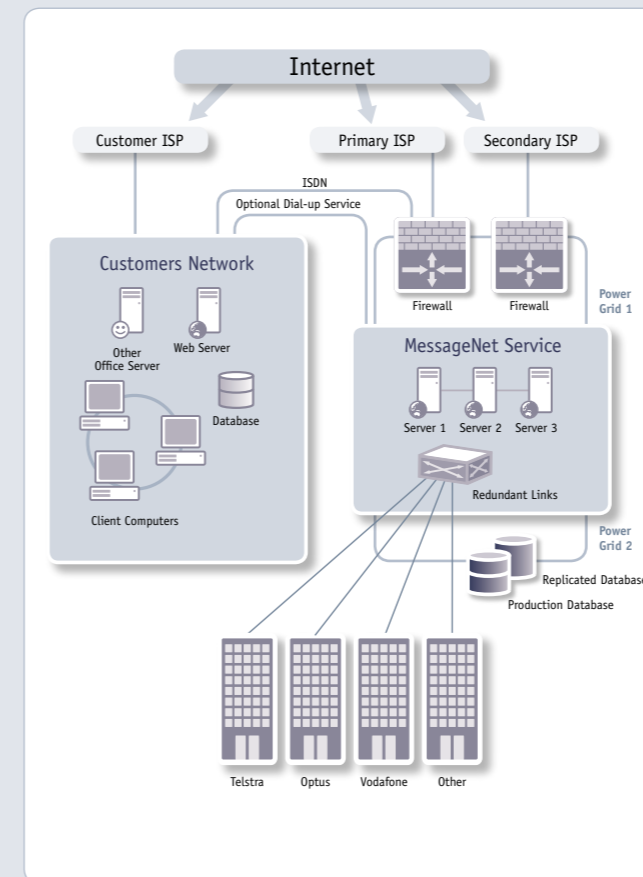

- C Source code
- .NET/ SOAP/XML
- TCP/IP
- Jsp
- SMTP
- HTTP
- FTP
- Cold Fusion
- Java

Features

- Configurable reply paths
- Message audit trail
- SMS-to-URL
- Online reporting and tracking
- XML integration
- Dedicated inbound SMS numbers
- Message delivery confirmation

OPERATE with confidence

Reduce system downtime and service outages. Provide a more efficient response to infrastructure failures and faults with MessageNet's mission critical SMS services.

- Housed in a secure telecommunications grade data centre
- Redundant power and Internet
- Monitored 24x7

DEPLOY with confidence

The SMS Advantage

Add a more reliable level of communication to your existing network monitoring processes. SMS communications offer a more immediate, cost effective solution.

With MessageNet SMS your IT departments can benefit from:

- Immediate delivery of critical information
- Rapid response rates
- Reduced system downtimes

About MessageNet

MessageNet is wholly Australian owned and has been pioneering SMS technology in the Australian market since 1995.

MessageNet operates as an ASP, effectively outsourcing mobile development, application design and hosting on behalf of business customers. We have a highly scalable and reliable infrastructure, which is fully redundant and housed in a telecommunications grade, secure data centre.

The service is operational 24 hours a day, 7 days a week. The system is monitored around the clock and qualified support staff are on call at all times.

MessageNet is committed to innovation and continues to provide comprehensive messaging solutions based on excellence in software design, reliability and support. With over 1,800 customers including **50% of the BRW Top 100 companies**, our reputation for reliability and technical know-how is well-established.
